

SCI-FI FLY-BY

 Shapeforms.com

////////// SOUND
////////// EFFECTS
////////// LIBRARY

Thanks for purchasing **Sci-Fi Fly By** and supporting independent audio!

Enrich video projects, trailers and environmental ambience with 650+ futuristic vehicle and spacecraft fly-by sounds.

Sci-Fi Fly By is packed full of ready-to-use one-shot (non-looping) audio assets ideal for bringing sci-fi films, animation, cutscenes and game trailers to life.

I hope you enjoy the library!

Using the library

Sci-Fi Fly By is organised into folders of broadly related content. Many of the sounds come in a short and long version for versatility.

To change the direction the vehicle travels in, use audio editing software to swap the Left and Right audio channels (the free audio database software Soundly can do this easily).

Experiment with layering multiple fly-bys over one another to create a near endless variety of spacecraft or to add sonic detail.

Some fly-bys are centred within the stereo field and are ideal for camera-bys or other effects not requiring the impression of a vehicle moving across the screen.

All sounds are normalized to roughly the same loudness. They feature minimal reverb/worldization to ensure maximum versatility – apply different reverbs/convolution to set the sounds in a particular space (eg. tunnels, warehouse interiors, etc)

Many of the sounds are based on engine loops found in **Sci-Fi Spacecraft**, a companion library ideal for both interactive and linear media. Subfolders in the Engine Loops category of **Sci-Fi Spacecraft** are largely mirrored in **Sci-Fi Fly By**, allowing you to easily create cutscenes or a video trailer for games that use sounds from **Sci-Fi Spacecraft**, or to expand the range of possibilities for use in film/video projects.

Library formats: 24-bit/48kHz wav

Metadata: Limited/Basic Soundminer, BWF

Mixing the sounds

If you'd like to push the sounds further back into the distance – perhaps you want them to sound as if they're emerging from another space or far away – you can either process the source audio files (as duplicate files) or apply audio effects in your game engine/video editing tool of choice.

There are a few ways to achieve this:

- **Lower the sample volume.** The easiest option of all is also one of the most effective.
- **Add a short fade-in** to the start of the audio file to reduce the initial transient of the sound, emulating what happens in real life as sound dissipates through air or bounced off walls and objects.
- **Apply reverb**, either algorithmic or convolution (from recordings of real-world spaces: rooms, halls, outdoor spaces and so on). Adjust the wet/dry ratio to match the space you want the sound to sit in, and how close it is to the 'camera' or listener's viewpoint.
- **Apply a low-pass filter (EQ)**, again either to the source file itself or in realtime using audio processing in a game engine or audio middleware such as Wwise or FMOD. Low-pass filters allow only the lower frequencies to be heard – removing high frequency details will make the sound appear to come from further away, or from behind a wall or obstacle. If you have any questions about how to process audio for a desired effect don't hesitate to get in touch – I'd love to help!

Sci-Fi Spacecraft library discount

The **Sci-Fi Spacecraft** companion sound library (designed for both games and film) includes a selection of sounds from **Sci-Fi Fly By** (designed primarily for linear media).

To account for this overlap, owners of **Sci-Fi Fly By** can purchase **Sci-Fi Spacecraft** at a discounted rate – a coupon code is included in the product folder.

If you do purchase **Sci-Fi Spacecraft**, the easiest way to ensure there are no duplicate files between the two libraries would be to delete the **Fly Bys** folder from **Sci-Fi Spacecraft**.

Updates and content requests

This library was made to help you accomplish your creative goals, so if there's anything I can add or improve upon to make it even more useful to you, please get in touch – I'll do my best to help!
